

TITLE

Ground anchoring device for floral pots, baskets and containers.

CLAIMS

I claim:

- 1. An anchoring device for securing floral containers to the ground that is lightweight and easily manipulated.**
- 2. The device is a vertical shaft having a hook at the top and a horizontal step along the vertical shaft. The length of the vertical shaft can be made to accommodate the size/shape of the container that will be anchored.**
- 3. The anchoring device is comprised of a hook on the top of a vertical shaft for grasping the containers that will be anchored.**
- 4. The anchoring device is comprised of a horizontal step along the vertical shaft to which force or pressure is applied for easy insertion of the device into the ground.**
- 5. The anchoring device works alone or in multiples depending on the size and/or shape of the container to be anchored.**
